The observed hump-shaped relationship between population diversity and population density in the year 1500 (Fig. 23(a)) does not reflect a potential underestimation of the diversity of pre-colonial Amerindian societies, which are all placed to the right of the hump. The impact of diversity on productivity in general and on population density in 1500 in particular is established based on variations in diversity within each continent, and thus an underestimation of the entire American population, as may well have occurred, would have no bearing on the depicted pattern. In fact, the statistical method used is such that even if the native population of each ethnic group in the Americas was, say, 100 times larger, the impact of diversity as depicted in Fig. 23(a) would remain intact. • 18 Ibid. • 19 Cook and Fletcher (2018); Depetris-Chauvin and Özak (2021); Ashraf

et al (2021). • 20 Manica et al. (2007); von Cramon-Taubadel et al. (2008). • 21 Ashraf and Galor (2013). • 22 Ashraf et al. (2021). • 23 Ibid. • 24 Ashraf and Galor (2013).
